

Talisay Gubat

Terminalia foetidissima Griff.

COMMON NAME: Talisay Gubat

LOCAL NAMES:

bangkaluang; dalinsi; magtalisay

DISTRIBUTION:

Found in secondary forests; usually present as a pre-disturbance remnant tree in mixed dipterocarp forests of up to 200 masl; also found in alluvial and dry sites (hillsides and ridges) on clayey to sandy soils.

DESCRIPTION:

Habit: Large tree growing up to 30 m high and about 80 cm dbh.

Leaves: Obovate, terminally crowded; 10-15 cm long; base cuneate, apex broadly rounded or sub-cordate.

Flowers: Yellowish white.

Fruit: Hard, ellipsoid, up to 5 cm long.

USES:

Wood: Used for house construction, cabinet works and making bancas.

Bark: Yields yellow dye.
